## M.Sc. Biochemistry Syllabus Under credit system at the Department of Biochemistry Dr. Bhimrao. Ambedkar University, Agra

Department Name	Programme Name	POs	PSOs
Biochemistry	M.Sc.	PROGRAMME         OUTCOME(POs)         PG           biochemistry will be able to achieve         PG	<b>PROGRAMME SPECIFIC OUTCOME (PSOs)</b> PG biochemistry will be able to achieve
		<ul><li>a. To develop analytical and critical-thinking skills that allow independent exploration of biological phenomena through the scientific method.</li><li>b. To prepare students for future careers in the various fields of biochemistry such as academic and research institution.</li></ul>	National Education Policy 2020 adopted (CBCS syllabus) with a combination of general and specialized education is well designed and very promising where the core course would help to enrich the subject knowledge of the students and generic electives make integration among various interdisciplinary courses.
		c. The foremost objective of the programme is to empower students with clear understanding of the basic concepts of biochemistry and provide them knowledge of the recent advances so that they can independently assess the vast research scope in the field.	PSO1: Know the basics of anti oxidative defense system in plants. Understand the importance secondary metabolites, fundamentals of photosynthesis, metabolism of nitrogen, polysaccharides and molecular mechanisms of signalization and regulation of plant hormones.
		d. Identification and Differential Diagnosis: To acquire biochemist position in leading hospitals and scientist position in industries.	PSO2: To demonstrate the knowledge of biochemical processes from the cellular and molecular aspects. Exhaustive study of Cell Signaling pathways, secondary messengers. Study of cell theory, Cell organelles, Ultrastructure, roles of cell organelles.
		<ul> <li>e. The programme includes details of bio molecules, metabolism, tools and techniques molecular biology, clinical biochemistry, proteins &amp; enzymes, immunology, cell biology, genetic engineering, clinical biochemistry, nanotechnology and bioinformatics to make the study of living system more comprehensive with in depth knowledge yet interesting which is the need of hour</li> <li>f. The practical courses have been designed to equip the students with the laboratory skills in biochemistry. The program offers students the knowledge and skill base that would enable them to undertake advanced studies in biochemistry and related areas or in multidisciplinary areas that involve biochemistry.</li> <li>g. The students will gain domain knowledge and know-how for successful career in academia, industry and research. Moreover, students will learn ever evolving professional demands by developing ethical inter personal and team skills.</li> </ul>	<ul> <li>organelles, Ultrastructure, roles of cell organelles.</li> <li>PSO3: Classify biomolecules with suitable examples and differentiate between their features. Analyze the interrelationship between biomolecules and their derivatives.</li> <li>Assemble and significance in biochemical reactions and characterization of biomolecules.</li> <li>Articulate concepts, parameters, mechanism and applications of different types of chromatography Illustrate the types of electrophoresis, applications and principles underlying the techniques NMR, CD, ORD. Specify the working mechanisms and applications of basic spectroscopic techniques.</li> <li>PSO4 : To learn principal concepts about biostatistics, To adapt skill in statistical technology like ANOVA, SD, SE, Corelation, Regrassion To use computers in data acquisition and processing and use available software as a tool in data analysis and Bioinformatics</li> <li>PSO5: The of the course is learning and understanding the fundamentals of molecular biology like nucleic acid as genetic material, replication, gene organization and its regulation etc</li> </ul>
			associated with immune system and molecular mechanism of their working. The students will be able to describe the roles of the immune system in both maintaining health and contributing to disease.
			PSO7: To apply the concepts of applications of enzyme in industry and clinical field.
			PSO8: To study the free energy and entropy. To understand various metabolic pathway.
			PSO9: The students will be able to understand and predict the

	various metabolic reactions in microbial cell, structure of viruses and eubacteria. To understand the role of microorganisms in domestic and industrial sewage.
	PSO10: To relate the calorific and nutritive value of foods and describe Physiological role of nutrients. To design the types of balanced diet for all age groups. To investigate the role of vitamins and minerals in maintaining proper health.
	PSO11: To assess the changes in various metabolic and clinical abnormalities. To detect various biochemical parameters in the diagnosis of diseases. To find the clinical manifestations in kidney function and liver function test.
	PSO12. To get familiarized about gene libraries construction and to perform blotting. To have in-depth knowledge, DNA sequencing, rDNA technology, cloning, gene therapy and their applications.
	PSO13. To get knowledge on basic pharmaceutical industry, therapeutic agents, mechanism of drug action and the principle of physico-chemical properties of drugs. To gain the knowledge the process involved in manufacturing of drugs, analyse the special requirements, reaction process and applications.
	PSO14: To learn about nanomaterial and nanoscience, PCR and RFLP. To get deep insight of Ti plasmid, Transgenic plants and their applications and basics of nanobiotechnology.
	PSO15: To get deep knowledge of various physiological functions of the human body and hematology
	PSO16: Understand environmental health and its hazards. Effect of Pesticides, insecticides and solution to the pollution.
	POS17: To learn the types of microarray chips and their production, gene therapy for human diseases, protein crystallization, MALDI-TOF and human genome project and protein- protein interaction.
	PSO18: To gain knowledge of co-transcriptional processing, translation in prokaryotes and eukaryotes, chromatin remodelers, alternative splicing, histone mRNA processing and concept of operon.
	PSO19: To attain a remarkable understanding of diabetes, thyroid disorders and renal and liver function tests along with biochemical aspects of hematology.

#### M.Sc. BIOCHEMISTRY SEMESTER – FIRST BC-101 C (Core Course) PLANT BIOCHEMISTRY

## **Course Outcomes**

On the completion	of the course, students will be able to:	
CO1	Students will be taught specific aspects of Plant Biochemistry that are not cov general biochemistry	ered under
CO2	The course has been a specialty of the Department of Biochemistry and is designed students comprehensive knowledge of molecular aspects of plant Biology.	to give the
CO3	Preparing a strong platform for a research career in the area	
CO4	In this course, students will extend their knowledge of Biochemistry fundamentals a metabolic processes taking place in plants. Acquire a detailed knowledge about polysaccharides, metabolism of nitrogen compounds and molecular mechanisms of a	and will learn about important photosynthesis, metabolism of signalization and regulation
(TOTAL CREDIT	-04,END SEMESTER MARKS-75,CIE-25)	
UNIT	Topic	No.of Lectures Hours 60
Ι	Structure and function of plant cell, cell wall, plasmodesmata, vacuoles, peroxisomes. Isolation of cell organelles, mechanism of the transport of water, inorganic and organic substances,Seed dormancy, growth and development.	15hrs
П	Photosynthesis: structure of organelles involved in photosynthesis in plants and bacteria, photo system I, II and their location, mechanism of quantum captures and energy transfers between photo system, reduction of CO <sub>2</sub> , C <sub>3</sub> , C <sub>4</sub> and CAM metabolism regulation of photosynthesis.Photorespiration and its significance.	15hrs
III	Biological nitrogen fixation: mechanism of nitrate uptake and reduction ammonia assimilation, sulphate uptake and transport. Mineral nutrition: micronutrients, macronutrients and their biological role in plants.	15hrs
IV	Secondary plant metabolites: biosynthesis of tannins, alkaloids (pyrrolidine, piperidine, coniine, quinolinate), flavonoids and surface waxes and their functions. Antioxidative defense system in plants. Plant hormones: Mode of action of auxins, gibberellins, cytokinins, ethylene, abscissic acid	15hrs

## **Reference Books**

Plant Biochemistry, Goodwin Mercer

Plant Physiology, Salisbury Ross

Biochemistry and Molecular Biology of Plants, by Buchanan

Plant Biochemistry and Molecular Biology, by Lea and Leegood Plant Biochemistry, by Dey and Harborne

#### M.Sc. BIOCHEMISTRY SEMESTER – FIRST BC-102 C (Core Course) CELL BIOLOGY AND CELL SIGNALLING

## **Course Outcomes**

On the complet	tion of the course, students will be able to:
CO1	Learn about structural organization of prokaryotic and eukaryotic cells, ultra structure and functions of cell organelles.
CO2	Understand about cell division: mitosis and meiosis; Cell cycle: check points, role of cyclin and cyclin dependent kinases in cell cycle regulation
CO3	Acquire knowledge about basics of signal transduction
CO4	Understand about protein trafficking in cells, Protein sorting, vesicular transport and protein targeting.

## (TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)

UNIT	Торіс	No. of Lectures
		Hours 60
I	Cell Membrane: Physicochemical Properties, Molecular Organization – asymmetrical organization of lipids, proteins and carbohydrates and functions.Transport across membranes: Types of transport (simple diffusion, passive-facilitated diffusion), active transport – primary and secondary group translocation, transport ATPases (V type, F type, P type, ABC type).	15hrs
Ш	Cell classification, cell variability (size, shape, complexity, and function). Structural organization of prokaryotic and eukaryotic cell. The ultrastructure of nucleus, mitochondria, endoplasmic reticulum (rough and smooth), Golgi apparatus, lysosomes and their function. The cytoskeleton: microtubules and microfilaments. The extra cellular matrix: collagen.	15hrs
Ш	Cell–cycle: phases of cell cycle, cell cycle check points, CdK, cyclins, MPF, p53, wait signal,Apoptosis. Cell division by mitosis and meiosis.Biochemistry of cancer: characteristics of cancer cell, carcinogenesis, carcinogenes, oncogenes and tumor suppressor genes.	15hrs
IV	Cell signaling: Forms of intracellular signaling, hormone and their receptors (steroid and plant hormones) Pathways of intracellular signal transduction: c-AMP pathway, c-GMP pathway, phospholipids and Ca <sup>++</sup> Ras, Raf and MAP kinase pathway JAK/STAT pathway	15hrs

#### M.Sc. BIOCHEMISTRY SEMESTER – FIRST BC-103 C (Core Course) BIOMOLECULES AND BIOINSTRUMENTATION

**Course Outcomes** 

On the com	pletion of the course, students will be able to:
CO1	The knowledge of the structure of biomolecules, gives an understanding of their physical and chemical properties and the basis of their functions in living organisms.
CO2	It prepares students for more advanced studies in Biochemistry.
CO3	The course will help students to acquaint with basic instrumentation,
CO4	Principle and procedure of various sophisticated instruments like UV-visible spectroscopy, different types of centrifugation, chromatography, electrophoresis, NMR, CD, ORD in biological research.

# (TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)

UNIT	Topic	No. of Lectures
	*	Hours 60
I		15hrs
-	Carbohydrates: Classification, structure of carbohydrates	151115
	(monosaccharides, disaccharides polysaccharides- homo- and hetero-	
	polysaccharides).	
	Lipids: Classification, structure, properties and functions of fatty acids,	
	essential fatty acids, fats, phospholipids, sphingolipids, cerebrosides,	
	steroids, bile acids, prostaglandins and lipoproteins.	
II	Amino acids: Structure, classification, abbreviation, properties and	15hrs
	functions of amino acids.	
	Proteins: Classification, structure and functions of proteins,	
	Ramachandran plot, Protein Sequencing.	
	Nucleic acids: Structure and function of nucleotides. Primary, secondary	
	and tertiary structure of nucleic acids. DNA forms (single stranded	
	DNA, A, B and Z DNA) syn and anti conformations. Types of RNA (m	
TTT	KNA, t KNA, rKNA, nn KNA, micro KNA).	1 51
111	Spectroscopy: Concept of spectroscopy, Laws of Photometry, Beer-	15hrs
	Lambert's Law. Instrumentation and application of UV, Visible, and IK,	
	Radioisotope Techniques: Units and measurement of radioactivity. Use	
	of radioisotopes in Biomedicine and research Electron Microscopy:	
	Transmission and scanning, freeze fracture techniques.	
IV	Electrophoresis: Moving boundary zonal electrophoresis. paper and gel	15hrs
	electrophoresis, isoelectric focusing.	10
	Chromatography: Paper Chromatography, Thin Layer Chromatography	
	(TLC), Ion exchange, gel filtration and affinity chromatography, High	
	Pressure Liquid Chromatography (HPLC) - Normal & reverse	
	phase.Centrifugation techniques and their application. subcellular	
	fractionation.	

### **Reference Books**

Principles of Biochemistry by Nelson, Cox and Lehninger

Biochemistry by G.Zubay

Biochemistry, D Voet and JG. Voet, J Wiley and Sons.

Physical Biochemistry: Applications to Biochemistry and Molecular Biology, D Freifilder, W.H. Freeman & Company. Practical Biochemistry, Wilson & Walker.

#### M.Sc. BIOCHEMISTRY SEMESTER –FIRST BC-104 C (Core Course) BIOSTATISTICS AND COMPUTER APPLICATIONS

#### **Course Outcomes**

On the complet	ion of the course, students will be able to:
CO1	Define the principal concepts about biostatistics
CO2	Recognize the definition of statistics, its subject and its relation with the other sciences in the field of research and skill based knowledge.
CO3	Collect data relating to variable/variables which will be examined and calculate descriptive statistics from these data. Identify data relating to variable/variables.
CO4	Understanding the basics of computers and computational data analysis which in-turn can be used for interpretation of data analysis Access various global bioinformatics centers such as NCBI, EBI and Genome Net etc

# (TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)

UNIT	Topic	No.of Lectures
		Hours 60
I	Measures of central tendency (arithmetic mean, mode, median), measure of dispersion, standard deviation, coefficient of variance, group data and graphic methods, frequency & distribution. Probability: Definition of probability, multiplication, law of probability, addition, law of probability, random variable permutation & combination. binomial, normal & poisson distribution.	15hrs
II	Tests of significance hypothesis and errors, Student statistics- Population mean equal a specified value. Equality of two independent means, Equality of two means. Non-parametric test Chi square statistics, test of goodness of fit. Regression and correlation coefficient, partial & multiple correlation, Relationship between regression and correlation. Analysis of variance:- One way analysis.	15hrs
III	Computers: Basics of common application software packages for word processing (MS Word), spreadsheets (MS Excel) and presentation (MS Powerpoint). Introduction of Internet- LAN, MAN, WAN.	15hrs
IV	Introduction to Bioinformatics: Concepts of Bioinformatics, Accessing and retrieving sequence information from genome sequence databases, use of genome data, overview of comparative and functions genomics, application of computers in Biochemistry.	15hrs

#### **Reference Books**

Khan and Khanum, Ukaz Publication Fundamentals of Computers, V. Rajaraman, Prentice-Hall India A Handbook of Agricultural Statistics, S.R.S. Chandel, Lal Prakshan

#### M.Sc. BIOCHEMISTRY SEMESTER –SECOND BC-201 C (Core Course) ESSENTIALS OF MOLECULAR BIOLOGY

**Course Outcomes** 

On the completion	of the course, students will be able to:	
CO1	Learn about nucleic acid as genetic information carriers, Possible modes of replication, and roles of helicase, primase, gyrase, topoisomerase, DNA Polymerase, DNA ligase, and Regulation of replicationDefine the principal concepts about biostatistics	
CO2	Understand the detailed mechanism and regulation of Eukaryotic DNA replication, alo Mitochondrial and Chloroplastic DNA Replication	ng with
CO3	Learn about mechanism and regulation of transcription in prokaryotes along with transcription.	Reverse
CO4	Understanding about the classes of DNA sequences, Genome-wide and Tandem repeats, Transposable elements, Centromeres, Telomeres, Satellite DNA, Mini satellites, Micro satellite DNA and Split genes	Retroelements, osatellites; Applications of
(TOTAL CREDIT	-04,END SEMESTER MARKS-75,CIE-25)	
UNIT	Торіс	No. of Lectures Hours 60hrs
I	Organization of Genetic materials in prokaryotes and Eukaryotes: Genetic material, Genome type, Size, Genome Organization - Structural Maintenance of Chromosomes (SMC) Protein, Eukaryotic Nucleosomes, Histones, Chromatin, Concept of Gene, mono-cistronic and poly-cistronic genes, Gene Structure with various functional units - replicon, muton, recon, C-value and C-value paradox; Unique sequences and Cot value, reassociation kinetics, Split genes: Exons and Introns.	15hrs
Ш	Replication: Modes of replication: Details of Meselson and Stahl experiment; Prokaryotic DNA replication:Origin and Initiation, elongation and termination; Roles, properties and mechanism of action of DnaA, Helicase, Primase, DNA gyrase, Topoisomerases, DNA Polymerases, DNA ligase, Leading and lagging strands; Okazaki fragments; RNA primers; Regulation of replication; Fidelity of replication; Viral replication, $\sigma$ or Rolling circle replication in $\phi$ X174 DNA damage and DNA repair: Types of DNA damages, Types of DNARepair systems, Photoreactivation.	15hrs
Ш	Eukaryotic DNA replication: Initiation, elongation and termination; Multiple replicons/initiation sites; Autonomously replicating sequence; Mechanism and significance of Origin recognition complex, Mini-chromosome maintenance proteins, DNA dependent DNA polymerases $\alpha$ , $\delta$ , $\varepsilon$ , Nucleases, DNA ligase and Telomeres in eukaryotic nuclear DNA replication; Regulation of eukaryotic DNA replication; Mitochondrial and Chloroplast DNA replication.	15hrs
IV	Transcription in prokaryotes: Initiation, elongation and termination; Prokaryotic promoter; weak and strong promoters, DNA dependent RNA polymerase: Physical properties, Templet strand, non-template strand, coding strand, Subunits, $\sigma$ factor, its types and function; Recognition of promoter; Transcription bubble, Direction of Transcription; Abortive initiations; Promoter clearance; Elongation factor Gre and its role, Rho dependent and Rho independent termination of transcription; Sigma cycle; RNA - dependent DNA polymerase and Reverse transcription.	15hrs

#### M.Sc. BIOCHEMISTRY SEMESTER –SECOND BC-202 C (Core Course) IMMUNOLOGY

## **Course Outcomes**

On the comple	etion of the course, students will be able to:
CO1	Learn the fundamental principles of immune response including molecular, biochemical and cellular basis of immune homeostasis.
CO2	Aid in understanding various aspects of immunological response and how its triggered and regulated.
CO3	Understand the rationale behind various assays used in immunodiagnostics of diseases and will be able to transfer knowledge of immunology in clinical perspective.
CO4	Develop understanding of principles of Graft rejection, Auto immunity and Antibody based therapy, develop the capacity for problem-solving about immune responsiveness, knowledge of pathogenesis of diseases and designing of immunology based interventions for effective treatment

(TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)				
UNIT	Topic	No. of Lectures		
		Hours 60		
I	Introduction to Immune System	15hrs		
	Memory, specificity, diversity, innate and acquired immunity, self Vs non-self discrimination.			
	Structure and functions of primary and secondary lymphoid organs. Cells Involved in			
	Immune Responses			
	Structure and Functions: Mononuclear cells (phagocytic cells and their killing			
	mechanisms), granulocytic cells (neutrophils, eosinophils and basophils), mast cells and			
	dendritic cell. Lymphoid cells (B-lymphocytes, T-lymphocytes and Natural killer cells).			
II	Nature of Antigen and Antibody Antigen Vs Immunogen, Haptens	15hrs		
	Structure and functions of immunoglobulins . Istopic, allotypic and idiotypic variations.			
	Generation of Diversity in Immune System. Clonal selection theory-concept of antigen			
	specific receptor. Organization and expression of immunoglobulin gens: generation of antibody diversity. Immunization: Active immunization (immunogrophylavis) Dessive			
	immunization (Immunotherapy) Pole of vaccines in the prevention of diseases			
TIT	Humoral and Cell-mediated Immune Responses Kinetics of primary and secondary			
	immune responses	151		
	Complement activation and its biological consequences. Antigen processing and	1 5mrs		
	presentation. Cytokines and co stimulatory molecules: Role in immune responses.			
	T and B cell interactions.			
	Major Histocompatability Complexes (MHC) Genes and Products Polymorphism of MHC			
	Role of MHC antigens in immune responses. MHC antigens in transplantation.			
IV	Measurement of Antigen- Antibody Interaction. Agglutination and precipitation	15hrs		
	techniques.			
	Radio Immunoassay, ELISA and ELISPOT			
	Immune fluorescence assays: Fluorescence activated cell sorter (FACS) technique.			
	Hypersensitivity: Immediate (Type I), Cytotoxic (Type II), Immune complex-mediated			
	(Type III), Delayed nypersensitivity (Type IV)			
	immune Responses in Diseases, immune responses to infectious diseases: viral (HIV),			
	Immunodaficiancy disorders: congenital (SCID) Lauckocyte adhesion deficiency. Chronic			
	minunouenciency disorders: congenitar (SCID, Leuckocyte adnesion deficiency, Chronic grapulomatous disease) and acquired (AIDS) immunodeficiencies. Autoimmunity			
	granutomatous disease) and acquired (AIDS) minunodenciencies. Autominiumity

#### M.Sc. BIOCHEMISTRY SEMESTER – SECOND BC-203 C (Core Course) ADVANCED ENZYMOLOGY

## **Course Outcomes**

On the completion	of the course, students will be able to:
CO1	Acquire the knowledge of enzymes their properties and classification, Mechanism of action, Michaelis- Menten initial rate equation, methods for the determination of Km and Vmax.
CO2	Learn about enzyme kinetics, effect of enzymes concentration, pHand temperature on kinetics of enzyme reactions, enzyme inhibition and activation, and multi-substrate enzyme kinetics.
CO3	Learn different immobilization techniques
CO4	Industrial and Clinical scope of enzymes.

(TOTAL CRED	IT -04,END SEMESTER MARKS-75,CIE-25)	
UNIT	Торіс	No. of Lectures
		Hours 60
I	Properties & classification of enzymes.	15hrs
	Kinetics of order of reactions, energy of activation, concept of ES complex, active site,	
	derivation of Michaelis-Menten and Briggs-Haldane equations for uni- substrate reactions.	
	Different plots for the determination of Km & Vmax (LB plot, Hanes plot, Eadle Holstee plot, Eisenthal Cornish Bowden plot) Importance of Kcat/Km Eactors affecting the rates of	
	enzymes catalyzed reactions- pH and temperature.	
	Reversible and irreversible inhibition-competitive, non-competitive, uncompetitive inhibitor.	
II	Enzyme purification techniques: objectives and strategy, methods of homogenization, method	15hrs
	of isolation and purification	
	Mechanism of enzymes action: Chymotrypsin, Triose phosphate isomerase, aldoase, lysozyme	
	- Methods to determine active site.	
TIT	Metalloenzymes.	
111	Allosteric enzymes: Sigmoidal kinetics & their physiological signification Hill and Scatchard	151
	Plots Symmetric and sequential modes of action of allosteric enzymes and their significance.	Ionrs
	Enzyme regulation: General mechanism of enzyme regulation. Feed back inhibition and	
	substrate inhibition. Reversible and irreversible covalent modifications of enzymes.	
IV	Immobilized enzymes and their industrial applications. Effect of partition of kinetics and	15hrs
	performance with particular emphasis on changes in pH and hydrophobicity.	
	Multienzyme system: Mechanism of action and regulation of pyruvate dehydrogenase and fatty	
	acid synthetase complexes. Immobilized multienzyme system and their applications.	
	Enzymes in medical diagnosis (aspartate aminotransferase, alanine aminotransferase, creatine	
	Kinase, lactate dehydrogenase) and enzyme therapy.

#### M.Sc. BIOCHEMISTRY SEMESTER – SECOND BC-204 C (Core course) INTERMEDIARY METABOLISM

## **Course Outcomes**

On the completion of the course, students will be able to:	
CO1	Learn Carbohydrate catabolism, and its association with cellular energy production, and carbohydrate anabolism in plants and animal cells.
CO2	Aquire the Knowledge of bioenergetics and energy transformation
CO3	Understand Lipid biosynthesis, Degradation of fatty acids and cholesterol, ketone bodies, acidosis, ketosis.
CO4	Understand about the Biosynthesis of purines and pyrimidine nucleotides, degradation of nucleotides, salvage pathways, biosynthesis and biodegradation of amino acids. Understand detailed mechanism of nitrogen metabolism

(TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)		
UNIT	Торіс	No.ofLectures Hours 60
I	Carbohydrates metabolism: Glycolysis, citric acid cycle and pentose phosphate pathway. Gluconeogenesis Glycogenesis & Glycogenolysis Regulation of blood glucose homeostasis by hormones.	15hrs
п	<ul> <li>Lipids Metabolism: Biosynthesis- Triacyglycerols, phospholipids, cholesterol, fatty acids, prostaglandins and ketone bodies.</li> <li>Fatty acid oxidation: β- oxidation of saturated and unsaturated fatty acid. Metabolism of circulating lipids: chylomicrons, LDL, HDL, and VLDL, free fatty acids.</li> </ul>	15hrs
Π	<ul> <li>Bioenergetics: Energy transformation, Laws of Thermodynamics,</li> <li>Biological oxidations, Gibb's energy, Free energy changes.</li> <li>Mitochondrial respiratory chain: ETC carriers (iron sulphur proteins, ubiquinone, universal carriers and cytochromes). ETC complexes I,II, III (Q cycle) &amp; IV, the stochiometry of proton extrusion uptake, shuttle system.</li> <li>Oxidative phosphorylation (OP): Coupling of ETC and OP, uncouplers, ATP syntahse, proton motive force, chemiosmotic theory, : P/O and H/P ratios. Mechanism of ATP formation. Respiratory controls and inhibitors of oxidative phosphorylation.</li> </ul>	15hrs
IV	Amino Acids Catabolism of tyrosine, phenylalanine, tryptophan, branched chain amino acids. Urea cycle and its regulation. Nucleic Acids Biosynthesis of Purines and Pyrimidines nucleotides. Degradation of Purines and Pyrimidines nucleotides. Regulation of Purine and Pyrimidine biosynthesis.	15hrs

Text Book of Biochemistry - West, Todd, Mason, Bruggen - Amerind Publishing Co. Pvt., Ltd.

#### M.Sc. BIOCHEMISTRY SEMESTER –THIRD BC-301 C (Core Course) MICROBIAL PHYSIOLOGY & BIOCHEMISTRY

**Course Outcomes** 

On the completion of	the course, students will be able to:
COI	Understand the basics of microbiology like Characterization and classification of microorganisms, cultivation, nutrition, physiology and growth of microbial cells, Learn and understand the basics of mycology, virology and production of mutants and their characterization.
CO2	Understand the basic microbial structure and functions of various physiological groups of prokaryotes and eukaryotes and also learn the theory and practical skills in microscopy handling and staining techniques.Know various Culture media and their applications and understand various physical and chemical means of sterilization and also learn various techniques for isolation of pure cultures
CO3	Comprehend the various methods for identification of unknown microorganisms and study microbial metabolism – Autotrophy and heterotrophy modes of nutrition. Understand the microbial physiology and know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement
CO4	The students will be able to understand and predict the various metabolic reactions in microbial cell. Understand the architecture of viruses, their classification and the methods used in their study.Discern the replication strategies of representative viruses from the seven Baltimore classes and comprehend the intricate interaction between viruses and host cells

(TOTAL CREDIT -	-04,END SEMESTER MARKS-75,CIE-25)	
UNIT	Торіс	No. of Lectures
		Hours 60
I	Types of microorganisms, general characteristics of main groups of microorganisms, Nutrition and growth of microbial cells with different growth curve- lag, log, stationary and decline phases. Synchronous growth, pure culture techniques and preservation methods	15hrs
П	Morphology and fine structure of eubacteria and archaebacteria cell wall, cytoplasmic membrane and other organelles. Staining methods: Gram staining, acid-fast, endospore and fungal staining Gram positive and gram negative organisms. Structure & function of peptidoglycan in gram positive and gram negative organisms. Functions of polymeric components in outer membrane and acidic polymers in gram negative organisms. Biosynthesis of bacterial cell wall and use of different inhibitors.	15hrs
III	Food spoilage, fermentation, food-borne infection (Staphylococcal, Clostridial, Salmonellosis, Shigellosis). Role of microorganisms in domestic and industrial sewage. Methods of sterilization in brief. Metabolism: EDP pathway, Xylose-5-phosphoketolase pathway	15hrs
IV	Virus structure, virus proteins, virus classification and methods of assay. Structure of bacteriophage, lytic and lysogenic life cycle Replication of RNA viruses-negative strand (VSV), positive strand (Polio), retrovirus (to include all events in the infectious cycle). Replication of DNA viruses (Adenovirus & SV 40). Virus-host interaction and prevention polio/AIDS, Hepatits	15hrs

#### M.SC. BIOCHEMISTRY SEMESTER -THIRD BC-302 C (Core Course) NUTRITIONAL BIOCHEMISTRY

## **Course Outcomes**

On the complet	ion of the course, students will be able to:
CO1	The student will learn and understand the basic concepts of nutrition, and nutritional values of foods, and Basal metabolic rate and measurement of energy requirements
CO2	The student will also learn and understand the dietary requirement of carbohydrates, lipids and proteins and their biological significance
CO3	o aid to learn the nutritional requirement and significance of dietary minerals like calcium, phosphorus, magnesium, iron, iodine, zinc and copper and vitamins like vitamin B complex, C and A, D, E & K.
CO4	Understand the condition of malnutrition, its prevention, and Recommended dietary allowances.Understand the condition of malnutrition, its prevention, and Recommended dietary allowances

## (TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)

UNIT	Торіс	No. of Lectures
		Hours 60
Ι	Basic concepts - Function of nutrients. Measurement of the fuel values of	15hrs
	foods. Direct and indirect calorimetry. Basal metabolic rate: factors	
	affecting BMR, measurement and calculation of BMR. Measurement of	
	energy requirements.	
II	Elements of nutrition – Dietary requirement of carbohydrates, lipids and	15hrs
	proteins. Biological value of proteins. Concept of protein quality. Essential	
	amino acids, essential fatty acids and their physiological functions.	
III	Minerals – Nutritional significance of dietary calcium, phosphorus,	15hrs
	magnesium, iron, iodine, zinc and copper. Vitamins - Dietary sources,	
	biochemical functions, requirements and deficiency diseases associated with	
	vitamin B complex, C and A, D, E & K vitamins.	
IV	Malnutrition – Prevention of malnutrition, improvement of diets.	15hrs
	Recommended dietary allowances, nutritive value of common foods.	
	Protein-calorie malnutrition. Requirement of proteins and calories under	
	different physiological states- infancy, childhood, adolescence, pregnancy,	
	lactation and ageing. Obesity: Definition, Genetic and environmental factors	
	leading to obesity.

#### M.Sc. BIOCHEMISTRY SEMESTER – THIRD BC-303 C (Core Course) CLINICAL BIOCHEMISTRY AND BIOSAFETY

**Course Outcomes** 

On the completion of the course, students will be able to:		
CO1	The student will be able to clinically assess the laboratory indicators of physiological conditions and diseases.	
CO2	They will know the biochemical and molecular tools needed to accomplish preventive, diagnostic, and therapeutic intervention on hereditary and acquired disorders.	
CO3	The course will The course will also aid in understanding the Biohazard and Biosafety, Biosafety guidelines of Government of India; Definition of GMOs.	
CO4	Roles of Institutional Biosafety Committee, RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs and Bioethics.	

# (TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)

UNIT	Topic	No. of Lectures
		Hours 60
Ι	Disorders of Carbohydrates Metabolism: Diabetes mellitus,	15hrs
	glycatedhemoglobins, hypoglycemias, various types of glucose tolerance	
	tests, glycogen storage diseases, galactosemia.	
	Disorders of Lipid Metabolism: Tay-Sach's, Gaucher's and Niemann-Pick	
	diseases, atherosclerosis and diagnosis tests.	
	Disorders of Amino Acid Metabolism: phenylketonuria, alkaptonuria,	
	tyrosinosis, albinism, maple syrup urine disease.	
	Disorders of Nucleic Acid Metabolism: Lesch-Nyhan syndrome, gout	
	orotic aciduria.	
II	Clinical and biochemical aspects of atherosclerosis, jaundice, diabetes,	15hrs
	hepatitis, glomerular nephritis, gall stones, Addison's disease, Conn's	
	syndrome, Cushing's syndrome, hypo & hyperthyroidism, Parkinson's	
	disease and Alzheimer's disease	1 51
111	Disorders of Erythrocyte: thalassemias and sickle cell anemia.	IShrs
	hemochromatosis Reve's syndrome) and liver function tests renal	
	diseases (glomerulonephritis, nephrotic syndrome, urinary tract infection,	
	urinary tract obstruction, renal failure) and renal function tests.	
IV	Biosafety: Historical Background; Introduction to Biological Safety	15hrs
	Cabinets; Primary Containment for Biohazards; Biosafety Levels;	
	Biosafety guidelines - Government of India; Definition of GMOs; Roles of	
	Institutional Biosafety Committee, RCGM, GEAC etc. for GMO	
	applications in 100d and agriculture; Environmental release of GMUs; Risk Analysis: Risk Assessment: Risk management and communication	
	Bioethics: Introduction, necessity and limitation	
	Discultures: Introduction, necessity and initiation

#### M.SC. BIOCHEMISTRY SEMESTER –THIRD BC-304 E (optional elective) GENETIC ENGINEERING

## **Course Outcomes**

On the com	inletion of the course students will be able to:
on the com	
CO1	Understand "Gene Regulation mechanism in Prokaryotes, Viruses and Eukaryotes
CO2	Differentiating between the different mechanisms involved, depending on the organism and the process involved in regulation.
CO3	Gain knowledge about Recombinant DNA technology by studying about various Vectors and Restriction Enzymes involve.Study of Various Expression Systems and Molecular Markers.
CO4	Clear & Lucid understanding of the Various Regulatory mechanisms and their Applications Screening of the libraries with the help of "Reporter Genes" and Molecular Markers such as RFLP, RAPD, and AFLP

(TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)			
UNIT	Торіс	No .of Lectures Hours 60	
I	Enzymes used in rDNA Technology: Outline of cloning procedure, Host controlled restriction and modification: Restriction endonucleases and cognate methylases, Class I, II & III restriction enzymes, Variants of Type II Restriction enzyme, Restriction digestion, Star activity, Restriction mapping, Formation of chimeric DNA, Homopolymer tailing, Synthetic Linkers, Adaptors and DNA ligase; Filling in and Trimming back; Significance of T4 DNA polymerase &Klenow Fragment, Alkaline phosphatase, Reverse transcriptase in cloning.	15hrs	
п	Plasmids: Plasmid classification on basis of phenotypic traits: Relaxed and stringent control of copy number; Plasmid incompatibility; Plasmid host range, Mobilizable plasmids and Triparental mating; Plasmid as cloning vector (recombinant plasmids): Properties of ideal plasmid cloning vectors, pBR322, pUC& pGEM3Z series, Transcriptional and translational fusion vectors; Fusion proteins; Selectable markers; Reporter genes.	15hrs	
III	Phage as a cloning vector: Advantage of using phage lambda vector, Genome map of phage lambda, In vitro packaging, Insertional and replacement vectors: Cosmid vectors; M13 phage and its role in single stranded DNA production, M13 series of vectors; Phagemids; Yeast as cloning vector: Basic principles of development of yeast vectors, 2µ plasmid, YEP, YRP YCP, YIP; Artificial chromosomes: YACs, BACs and PACs.	15hrs	
IV	Screening and selection of recombinants: Functional (genetic) complementation (Blue-white screening, Red-white screening), Nutritional complementation, Gain of function, Colony hybridization, Plaque hybridization, Southern blotting and hybridization, Dot blot, Zoo blot, Plus-Minus screening, Northern blotting, Immunological screening, Western blotting, South-Western blotting, North-Western blotting, HART, HAT	15hrs

#### M.SC. BIOCHEMISTRY SEMESTER – SECOND BC-305E(Optional\Elective) PHARMACEUTICAL BIOCHEMISTRY

## **Course Outcomes**

On the completion of the course, students will be able to:			
CO1	Understand about monoclonal antibodies and its applications along with regulatory requirements		
CO2	Understand about formulation of proteins and peptides, adult-phase drug delivery systems		
CO3	Understand about injectable lipid emulsions, liposomes, polymeric systems for oral protein and peptide delivery.		
CO4	Understand about the pulmonary drug delivery systems for biomolecules; Lipid based pulmonary delivery, Arosols etc. Understand about different polymers used for controlled drug delivery		

JNIT	Торіс	No. of Lectures
		Hours 60
I	Monoclonal antibodies: applications, generation, recombinant antibodies, production methods, Pharmaceutical, regulatory and commercial aspects.	15hrs
Π	Formulation of proteins and peptides: making small protein particles, precipitation of proteins, quality control issues, multi-phase drug delivery system; Preparation of collagen, gelatin particles, albumin microparticles	15hrs
III	Proteins and phospholipids: structural properties of phospholipids, injectable lipid emulsions, liposomes, cochleal phospholipids structures; Polymeric systems for oral protein and peptide delivery.	15hrs
IV	Pulmonary drug delivery systems for biomacromolecules; Lipid based pulmonary delivery; Solid colloidal particles; Polycyanoacrylates; Poly (ether- anhydrides); Diketopiperazine derivatives; Poly ethylene glycol conjugates; Factors affecting pulmonary dosing. Aerosols, propellents, containers types, preparation and evaluation, intra nasal route delivery systems: Types, preparation and evaluation.	15hrs

#### M.SC. BIOCHEMISTRY SEMESTER – THIRD BC-401C (Core Course) **APPLIED BIOTECHNOLOGY**

## **Course Outcomes**

On the completion	n of the course, students will be able to:
CO1	Understand principle and application of PCR, Rapid DNA and RNA sequencing techniques, High throughput Sequencing, and Microarray.
CO2	Learn about the principle& applications of Blotting and hybridization.
CO3	Introduced with DNA fingerprinting and Molecular Markers
CO4	Learn about application of recombinant microorganism, plant biotechnology & animal biotechnology to develop understanding of basics in protein engineering and bionanotechnology

(TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)			
UNIT	Topic	No. of Lectures	
		Hours 60	
Ι	Principle & applications of PCR; RACE, Degenerate PCR, Realtime PCR, Site Directed Mutagenesis: oligonucleotide directed, PCR based Mutagenesis, Antisense RNA technique, ribozymes, Microarray techniques for DNA	15hrs	
п	Rapid DNA and RNA sequencing techniques: Sanger method, Maxam and Gilbert procedure, automated DNA sequencing, pyrosequencing; High throughput Sequencing Human Genome sequencing, and comparative genomics.Molecular Markers: RFLP, RAPD, AFLP, DNase I foot printing. Genome editing.	15hrs	
Ш	Application of recombinant microorganism: Production of recombinant pharmaceuticals, therapeutic proteins, Production of Restriction Enzyme,Production of Antibiotics, Production of Biopolymer,Combating Human Diseases,Biopesticides, Bioremediation	15hrs	
IV	Plant Biotechnology:Ti plasmid, Binary and Cointegrate vectors derived from Ti plasmid of Agrobacterium, plant virus vectors, Transgenic plants and their applications. Protein Engineering: Concept of designing of new protein molecule, Application of protein engineering. Basics of nanobiotechnology.	15hrs

#### M.Sc. BIOCHEMISTRY SEMESTER – THIRD BC-402 C (Core Course) HUMAN PHYSIOLOGY

## **Course Outcomes**

On the comp	etion of the course, students will be able to:
CO1	Describe the composition of blood and explain the process of erythropoisis and enlist various factors that regulate erythropiosis to explain two pathways that initiate blood clotting different types of blood groups and its importance during blood transfusion.
CO2	The knowledge of various body fluids such as blood and urine, their detail composition and alterations under various pathological conditions is of paramount importance.
CO3	To understand excretory system
CO4	Detailed Physiology of Nerve impulse transmission and muscle contraction is vital to our understanding of these important physiological processes.

# (TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)

UNIT	Торіс	No .of Lectures
		Hours 60
I	Blood: Composition and functions of plasma, erythrocytes including Hb, leucocytes and thrombocytes, plasma proteins in health ad diseases. Blood coagulation mechanism and regulation, Fibrinolysis. Transfer of gases – oxygen and carbon dioxide. Bohr effect and chloride shift.	15hrs
II	Digestive system: Composition, function and regulation of saliva, gastric, pancreatic, intestinal and bile secretions-digestion and absorption of carbohydrates, lipids and proteins.	15hrs
III	Excretory system: Structure of nephron, formation of urine, glomerular filtration, tubular reabsorption of glucose, water and electrolytes, tubular secretion. Regulation of an electrolytes balance and regulation of kidney function by hormones	15hrs
IV	<ul> <li>Nerve: structure of neuron, membrane potential, action potential, voltage gated channels, role of ions during action potential, transmission of action potential, synapse, synaptic transmission.</li> <li>Muscles: Structure of skeletal, smooth &amp; cardiac muscles. Neuromuscular junction and transmission, excitation and contraction coupling</li> </ul>	15hrs

#### M.Sc. BIOCHEMISTRY SEMESTER- FOURTH BC-403 E (optional elective) ENVIRONMENTAL BIOCHEMISTRY

#### **Course Outcomes**

On the completion	n of the course, students will be able to:
CO1	Understand Microbiology of air and aquatic environments, Biological Oxygen Demand and pollution problems.
CO2	Students will be familiar with environmental pollution, Xenobiotic toxicity/ genotoxicity, Mode of action of pesticides, fungicides and insecticides; Bioaccumulation and bioremediation.
CO3	Students will become aware of recycling of organic waste, composting and vermi- composting and municipal solid waste treatment and management.
CO4	Students will get familiarized with Microbial biotransformation/ degradation of organic pollutants, xenobiotics, pesticides, herbicides, heavy metals and radio isotopic materials and biodeterioration.

#### (TOTAL CREDIT -04, END SEMESTER MARKS-75, CIE-25) UNIT Topic No of Lectures Hours 60 Ι Environment: Basic Concept & Issues. 15hrs Environmental pollution: Types of pollution. Air pollution & its control through biotechnology. Water pollution & its Control: Water as a natural resource, need for water management, measurement of water pollution, source of water pollution. Π Toxic effect: Basis for general classification & nature. Dose-Response relationship. 15hrs Synergism & Antagonism. Determination of ED-50 & LD-50. Acute & chronic exposures. Factors influencing toxicity,. Xenobiotics metabolism: Phase-I reactions: Oxidation, reduction, hydrolysis & hydration. Phase-II reactions\conjugation: Methylation, glutathione & amino acid conjuctions, detoxifications. III toxicity: Insecticides-Organochlorines, Anti-cholinesterase-Pesticide 15hrs Organophosphates and Carbamates. Fungicides, Herbicides. Environmental consequences of pesticide toxicity. Biopesticides. Metal toxicity: Toxicology of Arsenic, Lead and Cadmium in target organs. Metabolism of CCl4 & Paracetamol & their effect in liver & kidney. IV Microbiology of degradation of xenobiotics in environment: Ecology considerations, 15hrs decay behaviour and degradative plasmid. Hydrocarbons, substituted hydrocarbons, oil pollution surfactants. Global Environment problems: Ozone depletion, Green house effect and acid rain.

#### M.Sc. BIOCHEMISTRY SEMESTER- FOURTH BC-404 E (Optional Elective) GENOMICS AND PROTEOMICS

#### **Course Outcomes**

On the completion of the course, students will be able to:			
CO1	Understand Genome sequencing, various types of sequencing technologies and sequencing approaches.		
CO2	Learn Pros and cons of different sequencing technologies. Major genome databases and methods of Genome analysis and their applications		
CO3	Acquire Basics and application of structural genomics, comparative genomics and functional genomics		
CO4	Learn various techniques of proteomics like 2D and MALDI. Methods of protein separation, detection and quantification. Various applications of genomics and proteomics in agriculture, human health and industry		

(TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)				
UNIT	Topic	No .of Lectures		
		Hours 60		
Ι	Introduction Structural organization of genome in Prokaryotes and Eukaryotes; Organelle D NA-mitochondria l, chloroplast; DNA sequencing-principles and translation to large scale projects; Recognition of coding and non-coding sequences and gene annotation; Tools for genome analysis-RFLP, DNA fingerprinting, RAPD, PCR, Linkage and pedigree analysis physical and genetic mapping.	15hrs		
II	Genome sequencing projects Microbes, plants and animals; Accessing and retrieving genome project information from web; Comparative genomics.Identification and classification using molecular markers-16s rRNA typing/sequencing, ESTS and SNPS.	15hrs		
ш	Microarray chips: Types of DNA chips and their production. Gene Therapy for Human Diseases. Protein Crystallization; Theory and methods: API Electrospray and MALDI-TOF. SNP's and GMS (Genome mismatch Signals)	15hrs		
IV	L. Proteomics Protein analysis (includes measurement of concentration, amino-acid composition, N terminal sequencing); 2-D electrophoresis of proteins; Microscale solution isoelectricfocusing; Peptide fingerprinting; LC/MS-MS for identification of proteins and modified proteins; MALDI-TOF; SAGE and Differential display proteomics, Protein-protein interactions, Yeast two hybrid systems. Functional Proteomics: Significance of Proteome research	15hrs

#### M.Sc. BIOCHEMISTRY SEMESTER- FOURTH BC-405 E (Optional Elective) GENE EXPRESSION AND REGULATION

## **Course Outcomes**

On the compl	etion of the course, students will be able to:
CO1	Transcription in Eukaryotes, Transcription factors, Nucleosome modifiers, Mediator complexes, Chromatin remodellers, Elongation factors in transcription; Cleavage and polyadenylation.
CO2	Learn and understand Post - transcriptional / Co-transcriptional processing of RNA, End modifications, RNA splicing, RNAediting, Alternative splicing.
CO3	Understand the fundamentals of translation in prokaryotes and eukaryotes, properties of Genetic code, Ribosome binding site; Formation of initiation complex; Transpeptidation and Translocation; Ribosome cycle
CO4	Understand Post - translational processing, splicing, Chemical modification, Proteolytic cleavage, Zymogen activation to understand regulation of gene expression; Concept of operon, Significance of repressor, Attenuation; Inhibitors of transcription and translation.

## (TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)

UNIT	Торіс	No. of Lectures
		Hours 60
Ι	Transcription in eukaryotes: Synthesis of pre-mRNA: Outline of process -	15hrs
	Initiation, elongation and termination, RNA Pol II, promoter, Enhancer	
	elements, Subunit structure of RNA Pol II, Roles of RNA polymerase II,	
	Transcription factors, Nucleosome modifiers, Mediator complexes,	
	Chromatin remodelers, Elongation factors in transcription; Synthesis &	
	processing of pre-rRNA and pre-tRNA: Outline of process, RNA Pol I and	
	III, promoters sequences.	
II	Co-transcriptional processing: Addition of 5' cap and 3' Poly A tail in	15hrs
	mRNA; Post transcriptional processing: RNA splicing – Type 1 and Type 2	
	Intron splicing, Spliceosome mediated splicing and maturation of precursors	
	of rRNA, mRNA, tRNA): Role of different ribonucleases in splicing,	
	covalent modifications, KNA editing, Alternative splicing, Histone mKNA	
III	Translation in prokaryotes and aukaryotes: Outline of the process. Initiation	15hm
111	elongation and termination: Adapter role of tRNA Genetic code Evidences	151118
	for a triplet codon. Properties of Genetic code. Codon family and Codon	
	pairs: Nonsense and Sense codons: Degeneracy: Significance of Isoacceptor	
	tRNAs and Wobble hypothesis: Codon bias: Amino acyl tRNA synthetase:	
	Classification. Specificity. Reaction catalyzed: A. P and E sites of ribosome:	
	Start and stop codons, Ribosome binding site; Formation of initiation	
	complex; Transpeptidation and Translocation; Ribosome cycle; Roles of	
	Initiation factors, Elongation factors, Release factors, Ribosome recycling,	
	Aminoacyl tRNA synthetases, catalytic role of GTP, Peptidyl transferase site	
	and Factor binding site of ribosomes in translation. Proofreading activity of	
	ribosomes and Fidelity of Translation	
IV	Regulation of prokaryotic gene expression; Concept of operon: Lac, Trp and	15hrs
	Ara operons, Significance of repressor, Attenuation; Inhibitors of	
	transcription and translation.

#### M.Sc. BIOCHEMISTRY SEMESTER- FOURTH BC-406 E (optional elective) MEDICAL BIOCHEMISTRY

## **Course Outcomes**

On the complete	ion of the course, students will be able to:
CO1	Discuss the fundamental biochemistry knowledge related to health and explain the clinical significance of the laboratory tests.
CO2	Diagnosis of clinical disorders by estimating biomarkers determining various substances including substrates, enzymes, hormones, etc and their use in diagnosis and monitoring of disease are applied.
CO3	Evaluate the abnormalities which commonly occur in the clinical field.
CO4	Review the information from each category of tests and develop a protocol for disease diagnosis to create awareness of different lifestyle diseases increasingly found in present day

UNIT	Торіс	No.of Lectures
I	Disorders of Carbohydrates MetabolismDiabetes mellitus, Glycated hemoglobins, Hypoglycemias.Various types of glucose tolerance tests.Disorders of ThyroidHyperthyroidism, Hypothyroidism.Thyroid function Tests: T3, T4, TSH, TRH	15hrs
II	<ul> <li>Disorders of Lipids</li> <li>Hypoliproteinemia, Hyperlipoproteinemia, Atherosclerosis</li> <li>Diagnostic tests for apolipoproteins, HDL – cholesterol, LDL – cholesterol and triglycerides.</li> <li>Diagnostic Tests for Proteins</li> <li>Total protein, albumin, globulin and fibrinogen</li> </ul>	15hrs
Ш	Liver Function TestsVan den Bergh test for bilirubin, urine and fecal urobilinogenDetermination of galactose, epinephrine testDetoxification and excretion testsProthrombin TimeDetermination of blood ammoniaKidneyFunction TestsUrea clearance test, Creatinine clearance testRenal plasma flowConcentration and dilution test	15hrs
IV	Biochemical Aspects of Hematology Complete blood count (CBC)- red blood cell, white blood cell, platelet counts, percent hemoglobin Bleeding time, clotting time Serum Aspartate aminotransferase, alanine aminotransferase, creatine kinase, gamma glutamyl transpeptidase, alkaline phosphatase	15hrs

## **Reference Books**

Tietz Fundamentals of Clinical Chemistry, Burtis Ashwood, Saunders Clinical Chemistry (Organ Function Test), M.N Chatterjee, Jaypee Biochemistry, A.C. Deb,Central

#### M.Sc. BIOCHEMISTRY SEMESTER –SECOND Minor ESSENTIALS OF MOLECULAR BIOLOGY

### **Course Outcomes**

On the completion of the course, students will be able to:				
CO1	Learn about nucleic acid as genetic information carriers, Possible modes of replication and roles of helicase, primase, gyrase, topoisomerase, DNA Polymerase, DNA ligase and Regulation of replication			
CO2	Understand the detailed mechanism and regulation of Eukaryotic DNA replication, along with Mitochondrial and Chloroplastic DNA Replication			
CO3	Learn about mechanism and regulation of transcription in prokaryotes along with Reverse transcription			
CO4	Understanding about the classes of DNA sequences, Genome-wide and Tandem repeats, Retroelements, Transposable elements, Centromeres, Telomeres, Satellite DNA, Mini satellites, Microsatellites; Applications of satellite DNA and Split genes			

(TOTAL CREDIT -04,END SEMESTER MARKS-75,CIE-25)				
UNIT	Торіс	No. of Lectures Hours 60		
I	Organization of Genetic materials in prokaryotes and Eukaryotes: Genetic material, Genome type, Size, Genome Organization - Structural Maintenance of Chromosomes (SMC) Protein, Eukaryotic Nucleosomes, Histones, Chromatin, Concept of Gene, mono-cistronic and poly-cistronic genes, Gene Structure with various functional units - replicon, muton, recon, C-value and C-value paradox; Unique sequences and Cot value, reassociation kinetics, Split genes: Exons and Introns.	15hrs		
II	<b>Replication:</b> Modes of replication: Details of Meselson and Stahl experiment; Prokaryotic DNA replication:Origin and Initiation, elongation and termination; Roles, properties and mechanism of action of DnaA, Helicase, Primase, DNA gyrase,Topoisomerases,DNA Polymerases, DNA ligase, Leading and lagging strands; Okazaki fragments; RNA primers;Regulation of replication; Fidelity of replication; Viral replication, $\sigma$ or Rolling circle replication in $\phi$ X174 <b>DNA</b> damage and DNA repair: Types of DNA damages,Types ofDNARepair systems, Photoreactivation.	15hrs		
Ш	Eukaryotic DNA replication: Initiation, elongation and termination; Multiple replicons/initiation sites; Autonomously replicating sequence; Mechanism and significance of Origin recognition complex, Mini-chromosome maintenance proteins, DNA dependent DNA polymerases $\alpha$ , $\delta$ , $\varepsilon$ , Nucleases, DNA ligase and Telomeres in eukaryotic nuclear DNA replication; Regulation of eukaryotic DNA replication; Mitochondrial and Chloroplast DNA replication.	15hrs		
IV	Transcription in prokaryotes: Initiation, elongation and termination; Prokaryotic promoter; weak and strong promoters, DNA dependent RNA polymerase: Physical properties, Templet strand, non-template strand, coding strand, Subunits, $\sigma$ factor, its types and function; Recognition of promoter; Transcription bubble, Direction of Transcription; Abortive initiations; Promoter clearance; Elongation factor Gre and its role, Rho dependent and Rho independent termination of transcription; Sigma cycle; RNA - dependent DNA polymerase.	15hrs		

#### **Reference Books**

Genes XI, by Benjamin Lewin

Biochemistry - J. David Rawn - Neil Patterson publication, NC.

Cell and Molecular Biology: Concepts and Experiments, by Gerald Karp

Transcriptional Regulation in Eukaryotes, by Carey and Smale

Translational control of gene Expression, by Sonenberg et al

Chromatin and Gene Regulation, by Turner

An Introduction to Genetic Analysis, by Griffiths et al
