

Sustainable Development Goal 2 focuses on "Zero Hunger" and aims to end hunger, achieve food security and improved nutrition, and promote sustainable agriculture by 2030. The targets under SDG2 include ending all forms of malnutrition, ensuring access to safe and nutritious food for all people all year round, and promoting sustainable agricultural practices. This goal recognizes the interconnectedness of food security, nutrition, sustainable agriculture, and rural development in achieving overall sustainable development. To achieve SDG2, efforts are made to increase agricultural productivity, support small-scale farmers, promote sustainable food production systems, and ensure equal access to land, technology, and markets for all. Additionally, addressing the impacts of climate change on agriculture and promoting research and technological advancements in agriculture are essential components of SDG2.

Research on Hunger Hunger remains one of the most pressing global challenges, affecting millions of people, particularly in developing countries like India. Addressing hunger requires multidisciplinary approaches, ranging from food security, nutrition, and agricultural innovations to policy-making and social interventions. Dr. Bhimrao Ambedkar University, a prominent academic institution in India, has been contributing to this global issue through various research initiatives. The University's research on hunger encompasses a broad spectrum of studies that aim to understand the underlying causes of hunger and malnutrition, as well as develop practical solutions. The research initiatives include exploring sustainable agricultural practices, enhancing food security through technological innovations, and studying the socioeconomic factors contributing to hunger. The institution also collaborates with various organizations and entities to create impactful interventions. The University has established partnerships with various stakeholders to amplify the impact of its hunger research. Collaborations with organizations facilitated fieldwork, data collection, and the implementation of pilot programs in affected regions. These partnerships help translate research findings into actionable policies that directly address hunger issues. The University's research on hunger represents a vital contribution to the global fight against this pervasive issue. Through its innovative projects, collaborative efforts, and dedication to sustainable solutions, the university is helping to pave the way toward a hunger-free world. Continued support for such research is essential to achieving long-term success in this critical area.

Dr. Bhimrao Ambedkar University's involvement in national hunger initiatives demonstrates its commitment to social responsibility and community welfare. Through education, research, and outreach, the university is making valuable contributions to the fight against hunger in India. However, by addressing challenges related to scalability and student engagement, and by expanding its partnerships and academic focus on hunger, University can play an even more significant role in tackling this critical issue on a national scale.

## Name of the Event: National Nutrition week

Students prepared over 25 millet-incorporated recipes and appreciated by the Honorable Pro Vice Chancellor and Registrar of the university for their commendable efforts

## **Celebration of Nutrition Month**

On the occasion of 'Nutrition Month' (September), children of Akanksha Sarvodaya Parishad School and Vivekanand Academy NGO were invited for a drawing program on community radio 90.4 "Agra Ki Awaz". Kids made the drawing thoughtfully, collected information and spent a happy time with radio team. Our effort was to give correct information about nutrition and Teachers' Day to these children while playing.
